

Informations Générales

- Nom de l'étudiant : KHAMRICH Mohammed
- Encadre par : Pr : B.ELBAGHAZAOUI

TP4 : Architecture Orientée Service (SOA)

Objectifs :

- Comprendre les principes de l'architecture SOA
- Créer des microservices avec Spring Boot
- Implémenter la communication inter-services via REST
- Gérer une base de données avec Spring Data JPA
- Utiliser un service de découverte (Eureka)

Test4 :

The screenshot displays the Swagger UI for a REST API. At the top, there's a navigation bar with tabs for GET, POST, and other methods. The main area shows a GET request to `http://localhost:8082/api/orders`. Below this, there are tabs for Docs, Params, Authorization, Headers, Body, Scripts, Tests, and Settings. The Params tab is currently selected, showing a table with columns Key, Value, and Description. The Body tab is also visible, showing a JSON response with details about an order, including id, productId, productName, quantity, totalPrice, orderDate, and status.
